5.0 out of 5 stars **Certainly, Definitely and Assuredly An Excellent Book!**

Reviewed in the United Kingdom on August 22, 2020

Verified Purchase

Drinking Water Guide is certainly, definitely and assuredly an excellent, beautifully written, easily understandable, and extremely useful book that drives you through the depths of the amazing formation of our mysterious and unimaginable Universe, handholds you and walks you through, and astonishes you by showing and teaching the depictions on how our spiral-shaped Milky Way Galaxy was created with billions of Stars (Solar Systems), while in a spinning and swirling motion, under the gravity, strong force, weak force and electromagnetic force, tours you through explaining the creation and formation of our Solar System, depicting the location and responsibility of our enormously supersized Sun, our beautiful green planet Earth, and our mind-blowing and brightly glowing moon, and confidently unveils you the origin of our planet Earth's liquid water (H₂O) that is fully responsible for "the creation, formation and evolution of life on our planet Earth" along with the scientific and proven details discovered and reported by our astronomers, cosmologists, scientists and space researchers, and blows you away and fascinates you with an incredible feeling of joy.

Your identity in this unimaginably humongous Universe pops up in your forefront. You will be amazed to learn and know where exactly you are living in this Universe of unlimited and incomprehensible boundaries!

Do not hesitate to collect this wealth of colossal sums of information onto your bookshelf!

I was amazed, intrigued, excited, blown away, inspired and honored when I read this amazing book titled "Drinking Water Guide."

The Creation and Formation of Our Universe > First Stars > Eventually Millions of Stars > Eventually Billions of Star > Eventually Trillions of Stars and Star Clusters > Formation of our Milky Way Galaxy > Our Solar System > Our Sun > Our Planet Earth Along With 7 Other Planets > Our Wonderful Moon.

Oh my goodness! I can't believe this has been what happening in the skies. All those stars have been manufacturing the heavier elements like factories and when they run out of fuel extinguish into supernovae explosions, and dump those heavier elements into the interstellar medium. The Solar Systems form in the interstellar medium from the stardust and interstellar gas in a spinning swirling motion. This is how our planet Earth formed orbiting around the Sun while containing all those 117 heavier elements that we see in our periodic table today. Amazing information !

The water formation occurred in the interstellar medium some 6 billion years ago, even before the formation of our Solar System. Our Solar System formation completed some 4.54 billion years ago. Scientist believe that up to 50% of our Earth's water formed in the interstellar medium and remained hidden in the stardust and interstellar gas from which our Solar System was created. And the remaining 50% of our Earth's water formed from the bombardment of Asteroids. Comets however were not responsible for the water formation.

The water we drink today is 4.54 billion years old. We must learn how to purify the raw water before drinking. We must drink purified water only (RO water or distilled water). And we must also learn how to precisely and carefully remineralize and slightly alkalize the purified water before drinking. I love this book and recommend it to everybody!

In the wake of scrutinizing this book, I am genuinely intrigued. Such a colossal amount of information of this book fascinated me, created enthusiasm and joy in my mind, and walked me through every single page by handholding. I wholeheartedly love and cherish this book.

Everybody needs to read this book, and understand the contents. Truly, this is the kind of drinking water guide our world needs today. Everybody should listen to and follow this guide's very important, practical and highlighted message in the current-day circumstances. Many people don't know how to drink water, and are still drinking tap water and bottled water without realizing how dangerous it is.

THIS GUIDE'S IMPORTANT MESSAGE TO ALL OF US: Please do not drink tap water, well water, and bottled water of any kind without knowing how pure it is. Please always drink purified water (Either RO water or distilled water). And we should learn how to remineralize and alkalize the purified water at home by using Himalayan pink salt, Celtic sea salt or ConcenTrace mineral drops. The author recommends that the purified water that is either neutralized (pH=7) or slightly alkalized (pH=7 to 7.25), and remineralized up to a TDS (Total Dissolved Solids) level of 200 ppm is the healthy drinking water.

My hearty congratulations go to the author of Drinking Water Guide for creating and publishing such an impressive and very useful book on drinking water for all of us.

5.0 out of 5 stars Tap water is untrustworthy so always drink purified water!
Reviewed in the United States on May 6, 2020
Verified Purchase

THIS BOOK TEACHES THAT: Tap water is untrustworthy even if you are living in a highly advanced country. If you are drinking tap water every day without testing, it could be a big mistake. Before it is too late, you should research and find out how safe is the tap water you drink at your home. The best precaution would be to get your tap water (drinking water) tested once or twice a year by a certified laboratory in your area, and make sure that the water you drink has no contaminants in it.

THIS BOOK RECOMMENDS THAT: Purchase purified water (RO water or distilled water) from supermarkets or from local vendors who can deliver it to your home. Learn how to test the water you purchased, and make sure it is indeed purified water (Don't get scammed by purchasing tap water). As explained in this book in Chapter 17, Chapter 18 & Chapter 19, learn how to precisely remineralize and alkalize the purified water at home. You have to do it correctly or you will face serious side effects. Everything is explained in this excellent book. I love this very useful health and safety guide!

5.0 out of 5 stars [Comprehensive Drinking Water Guide](#)
Reviewed in the United States on February 17, 2020
Verified Purchase

NIKOLA TESLA said it all: "only a lunatic will drink unsterilized water". Very many people are still drinking unsterilized tap water and contaminated bottled water, jeopardizing their health, and developing strange diseases, and making many trips to hospitals and board-certified doctors. The tap water disaster incident that occurred in Flint, Michigan, USA in 2014 is a typical example of lead contamination that affected more than 100,000 residents.

This book describes about all kinds of drinking water available for human consumption, their defects, and appropriate "recommendations" in order to rectify those defects, and how to drink clean and healthy water in order to protect your health in the current day circumstances. This book Drinking Water Guide teaches many drinking water strategies:

(i) I must be wise and cautious all the time and should not take chances. I must not drink tap water, well water or bottled water of any kind, and make my own distilled water by purchasing and using a home distiller. Or, I must purchase RO water from a nearby supermarket, and I must always drink only purified water.

- (ii) I would add very little Himalayan pink salt, Celtic sea salt or a few drops of ConcenTrace mineral drops to remineralize the purified water before drinking.
- (iii) I would add a tiny bit of baking soda or a few drops of ConcenTrace mineral drops in order to improve the alkalinity and the presence of minerals in the purified water.
- (iv) I would use pH strips or digital pH meter, monitor my drinking water pH, every now and then, and make sure that the purified water I drink is either neutralized (pH=7) or slightly alkalized (pH=7 to 7.5).
- (v) I would use a TSD meter, and monitor the TDS level of my drinking water, and make sure that TDS level is always below 200 ppm. I will also research and find out the ideal TDS level that suits my body. I can do that by adjusting the tiny amount of Himalayan pink salt.

I am very grateful that I learned all the above-mentioned valuable information from this book "Drinking Water Guide". What an impressive book! I urge you to get this book without any hesitation.

Scientists published reports by proving that more than 99% of the human body's molecules are water molecules, and 55% to 60% of an adult human body weight is water. We the humans therefore should make sure that the water in our bodies is clean, healthy and nutritious, and more importantly one 100% free of contaminants. This book is loaded with 20 chapters of colossal amount of information to help us achieve that goal!

This book insists that we should always drink purified water, and avoid tap water or bottled water. Many people still drink tap water and bottled water, and they keep drinking it without even noticing that they contracted water-borne diseases. They start treating their diseases by going to medical specialists without looking back what kind of water they drank daily. We should learn our lesson by reading through this book.

Everybody should read this book, and learn how to drink water that benefits the human body in the proper way, and protects from water-borne diseases, and keeps us healthy.

Barinder Thakur

5.0 out of 5 stars I Was Unquestionably Intrigued!

Reviewed in India on 16 May 2020

Verified Purchase

I was inspired to read, read and read, and felt good while reading. I learned everything about drinking water explained in 20 distinct chapters. I will refer to this book for the rest of my life, and I dont need any other book. I am absolutely sure that everybody will love this amazing book! I commend the author who penned this great book!

This book's extremely realistic message is that we must drink only purified water after remineralizing it up to a TDS (Total Dissolved Solids) level of 200 ppm, and after slightly alkalizing it up to a pH of 7.25. I am very happy that I learned everything in this book on how to prepare that kind of healthy drinking water properly at the comfort of my home.

Packed with the colossal sums of amazing and extremely useful information, this book is consisting of very many anecdotes and scientific facts and discoveries by astronomers and space researchers such as the one described below.

The water formation took place some 6 billion years ago in the interstellar medium. Our Solar System began its formation from a gigantic cloud of star dust and interstellar gas some 6 billion years ago, and completed its formation 4.54 billion years ago. Our planet Earth is 4.54 billion years old, and the water we drink today is also 4.54 billion years old. I have read everything about how researchers proved from both experimental and modeling results that our planet Earth inherited up to 50% of its water from the interstellar medium, and the remaining water came to Earth by the bombardment of Asteroids (not by Comets as our ancestors believed). But the question pops up on everybodys mind is How Did the Water Get Into the Interstellar Medium? This book answers that question fantastically. Under suitable climate conditions, water formed by the chemical reaction between the elements hydrogen and oxygen $2 H_2 + O_2 = 2 H_2O$. I encourage you to read this book, and enjoy the details.

Healing Powers

5.0 out of 5 stars **Best Guide On Drinking Water**

Reviewed in India on February 17, 2020

Verified Purchase

This book entertained me from start to finish. All contests are very well discussed, very interesting, and very useful to all people. I have read the first chapter over and over again to understand the creation and formation of our Universe, stars, galaxies, and the creation and formation of our Solar System. It was interesting to learn that our Sun manufactured our Solar System along with 8 planets, including our planet Earth. It is more interesting to learn that stars were responsible to manufacture all those 117 heavier elements of the periodic table (including carbon, oxygen, nitrogen and other heavier elements) in their burning cores, which are needed for the survival of all living things of our entire world, including every human being, animal & plant. Everything is explained clearly in a simple language so that a layperson can easily understand. The first chapter is astonishing.

All kinds of drinking water are discussed, dedicating a separate chapter for each kind of water. The author gives recommendations with incredible tips at the end of each chapter.

This book recommends that we should always drink only purified water (RO water or distilled water) that is remineralized up to 200 ppm, and slightly alkalized. I sincerely appreciate the author for giving us such an important book on drinking water. I recommend this book to all people. I am sure many people will benefit from this guide.

A Collins

5.0 out of 5 stars Complete Guide on Drinking Water

Reviewed in Canada on February 15, 2020

<https://www.amazon.ca/>

Drinking Water Guide would certainly benefit us in a way we could never have imagined. Everyone should get this book, and let the whole family know about its contents.

We all have been drinking tap water naively at home and in restaurants for decades. Now, after reading this book, I decided to drink only purified water (RO water or distilled water), at least 8 cups a day. I would definitely purchase a home distiller, and make my own distilled water (100% purified water). Or, I would purchase RO water in the nearby supermarket, and boil it and refrigerate it before drinking.

I am now self-disciplined! I would always carry purified water in my bag wherever I go and whenever I go out. Of course I should try to remineralize the purified water as the book recommends. I now know that I can make my own "mineral water" comfortably at home by simply adding a tiny bit of Himalayan pink salt or Celtic sea salt to purified water a few times a day (it is very easy to do it). This book gave details of Himalayan pink salt, which contained 88 minerals. Our bodies desperately need all those 88 minerals. I would eat one lemon a day or add lemon juice to purified water. And I would add a tiny bit of baking soda and a pinch of Himalayan pink salt to purified water while cooking my meals. These habits would keep my body safe and healthy as I firmly believe that it is the healthy way of providing water to our human bodies.

Drinking Water Guide is exactly the kind of guide I have been looking forward to meet with, and HE is out there readily available within our reach! Fantastic information!

Has more info on water and ALL the filters they have. What you need after you figure your water type . Also tons of info on filters and at the end his recommendations for best ones in the class like pitcher filter, faucet, whole house and more. Don't think you could get more info than he has. Easy to read and lots of information.

The additional information, for example, the fat consuming nourishment was extremely valuable for me particularly collaborated with the plans they could be included into.

Generally a decent book with loads of incredible tips, and ones that you would effortlessly adhere to whenever spurred enough.

4.0 out of 5 stars [An inspiring book](#)

August 24, 2019

[Format: Kindle Edition](#) [Verified Purchase](#)

I was indeed thrilled to read through and learn the amazing descriptions on the formation of our Universe after the Big Bang, formation of stars, planets, galaxies, including the formation of our solar system, our Sun and our planet Earth. The contents of Chapter 1, Chapter 13, Chapter 15 & Chapter 16 are adorable. In a nutshell, this book teaches that we should avoid tap water, well water & bottled water, and drink only purified water that is either neutralized or slightly alkalized, and remineralized up to a TSD (Total Dissolved Solids) level of 200 ppm. **The book teaches how to alkalize and remineralize the purified water with sample experiments conducted at home.** The book teaches healthy water-drinking habits, and gives recommendations at the end of each chapter. I greatly admire and recommend this highly researched, well-documented, and fully comprehensive guide on drinking water to every adult living on our planet Earth. Helpful.

This book was one of the best books I have read recently. It explains the potential pollutants that can be in your drinking water, evaluates some of the risks, gives you criteria to decide whether or not to get your water tested (with resources for reputable testers), evaluates several different methods of drinking water filtration, and even reviews and rates available systems. I've been going round in circles trying to get some clear answers and finally found them in this book.

This is an excellent read! Entertaining from start to finish. This book highlights the importance of water: helps us to consider what we might do now to ensure that the tap continues to flow here, and; encourages us to support the provision of clean water to other areas of the world that do not currently have water security.
