**5.0 out of 5 stars** Inspiring & Informative Book

Reviewed in the United States on February 19, 2020

**Verified Purchase**

The first chapter is inspiring and lovely. Our Universe, our Stars, our Milky Way Galaxy, our Solar System, our Sun, our Planet Earth & our Moon: How were they created? This book answered that question clearly with amazing descriptions based on scientific research.

Common sense tells that Earth could have gotten water from an external source such as comets, asteroids or meteorites such as carbonecious chondrites, which contain water as well as carbon. It was known to scientists that our planet Earth was bombarded by comets, asteroids and meteorites (such as carbonecious chondrites). If water came from the dirty ice-balls, then comets are logical candidates for the existence of water on Earth, but scientists proved that the Deuterium-to-Hydrogen Ratio (D/H Ratio) on comets is too high, and did not match with that of sea water.

The researchers were able to match the Deuterium-to-Hydrogen Ratio (D/H Ratio) between the sea water and the water samples from Asteroids (specifically carbonecious chondrites). Which means that the Earth could have accreted at least 50% of its water from Asteroids during the early states after its formation. Our Earth already inherited up to 50% of its water from interstellar medium even before it was created in our Solar System. I am glad that I learned the aforementioned very important scientific truth from this book.

Deanna Maio

*5.0 out of 5 stars* Wonderful Book

Reviewed in the United States on February 17, 2020

**Verified Purchase**

Comets did not contribute to the water formation on the Earth. This book explores that Asteroids contributed to the water formation on the Earth about 4.54 billion years ago (which is the age of our Solar System, Our Sun & Our Earth). Based on scientific research findings, this book explores that our Earth inherited up to 50% of its water from the interstellar medium even before its birth.

Our Solar System was created from a gigantic cloud of space dust & gas of a deceased star some 6 billion years ago in the interstellar medium. At that time that space dust and gas of the interstellar medium already filled with water, and enter into the planet Earth during its formation. It is a fascinating book, and I feel like reading it over and over again.

*5.0 out of 5 stars* Awesome Book

Reviewed in the United States on February 18, 2020

**Verified Purchase**

I appreciated Chapter 1 so much in which the creation and formation of our Universe is described with beautiful depictions and images.

I did not know until I read this book that the water we drink today is 4.54 billion years old. Research proved that our Earth inherited 50% of its water from the interstellar medium, and the remaining water came to Earth from the bombardment of Asteroids (not Comets). Very interesting to learn that our planet Earth was manufactured by our Sun in a swirling and spinning motion for one and half billion years before the Solar System was ready.

Healing Powers  
5.0 out of 5 stars Great Book About Earth's Water  
Reviewed in India on February 17, 2020

Verified Purchase

I am very happy to learn the Formation of Our Universe, Stars, Milky Way Galaxy, Solar System, Sun, Earth & Moon from this book. This book revealed the very important scientific truth: The water we drink today is 4.54 billion years old. About 4.54 billion years is proved to be the age of the water we drink today, the age of our planet Earth, the age of our Sun and the age of our Solar System. We scientists determined the age of our Earth by radiometric dating, which is very accurate method. Comets were not responsible for the Earth's water like our ancestors insisted. It was a myth. Scientists proved that Asteroids largely contributed to 50% of water formation when our Earth was very young some 4.54 billion years ago.

As a matter of fact, the current scientific research proved that our Planet Earth inherited up to 50% its water from the interstellar medium even before it was born. Our Solar System was created from a gigantic cloud of space dust and gas in the interstellar medium, which already contained water molecules in it, and that gigantic cloud was already enriched with 118 heavier elements that our Earth possessed now.

A Collins

5.0 out of 5 stars Very Important Book  
Reviewed in Canada on February 15, 2020

This book describes the creation and formation of our Universe and our Solar System impressively with amazing descriptions based on scientific research. This book presents scientific data collected by NASA's scientists and space researchers regarding the origin of the Earth's water. The majority of scientific studies convincingly revealed the fact that our planet Earth inherited up to 50% of its water from the interstellar medium even before its birth, and the remaining water was believed and proved to have obtained from the bombardment of asteroids (meteorites/ carbonaceous chondrites) during the early stages of the formation of our planet Earth in the solar system. The scientific data on deuterium-hydrogen ratio (D/H Ratio) collected by our researchers supported this conclusion.

The water we drink today is 4.54 billion years old, which is also the age of our planet EARTH. I love this book!

August 25, 2019

[Format: Kindle Edition Verified Purchase](#)

This is a good book if you are at all wanting to know more about water filtration. The author also includes different products and his rating of each of these. I was a bit surprised to not see a company called multipure mentioned that has been in the water filtration business for many years though. That is the filter I have used for the past 20 years and they have independent lab tests to prove they do a great job of filtering. I thought it would be useful to look at various types of filtering and see what is new. I would suggest this book to anyone who is concerned about drinking clean water and wants to understand how filtering works.
